WENQIONG (WEN) TU

15572 Cherry Path, Rosemount, MN 55068 | wt2tf@virginia.edu | 434-466-8451 | www.wenqiong.org

Objective: Use established CAE expertise to help company to solve problems and power innovation

Summary of Qualifications

- 6 years of experience in structural and stress analysis via various finite element software
- 6 years of experience in programming and code development for solid mechanics applications
- Proficiency in analysis and design of various structural components
- 6 peer-reviewed journal articles in composite materials, structural analysis, fracture and damage, finite deformation, plasticity, optimization, biomaterials

Education

University of Virginia (UVA), PhD (2016) Charlottesville, VA, US

- Applied mechanics in Civil Engineering; GPA 3.9/4.0

Huazhong University of Science and Technology (HUST) Wuhan, China

- **M. S.** in Solid Mechanics, 2010, GPA 3.8/4.0; **B. S.** in Engineering Mechanics, 2008, GPA 3.7/4.0

Skills: Abaqus, 3DEXPERIENCE Platform, Isight, fe-safe, ANSYS, LS-DYNA, HyperMesh, Matlab, Python, Fortran

Work Experience

- **Dassault Systèmes Simulia Corp** Minneapolis , MN

Technical Intern June 2015- November 2015

- Preparing high-quality Abaqus workshops for both academic and industrial customers and resolving customer incidents in a timely manner through independent research and by collaborating with team members.
- Evaluation of homogenized moduli of composite materials with Finite-Volume micromechanics and Abaqus and the work has been presented in the poster session of SIMULIA Regional User Meeting.
- Extensive training with Abaqus in fracture and failure modelling, user subroutine, convergence and contact, analysis of flexible multibody system, etc.
- Training in fatigue package, Fe-safe and automation and optimization package, Isight, as well as in 3DEXPERIENCE platform which powering INDUSTRY SOLUTION EXPERIENCES, based on 3D design, analysis, simulation and intelligence software in a collaborative interactive environment.

- **Applied mechanics, UVA** Charlottesville, VA

Graduate Research Assistant January 2011- present

- **"Investigation of damage evolution in composite materials"**
- Developed an efficient numerical tool in modeling crack initiation and propagation with excellent stability.
- Simulated fiber/matrix debonding in SiC/Ti composites and damage evolution in cross-ply laminates.
- One peer-reviewed article has been published and another one is under review.

- "**Computational evaluation of homogenized properties of periodic materials via Abaqus**"
- Utilized python to create periodic unit cell and apply periodic conditions via constraint equations.
- Applied unit strain and analyzed the unit cell 6 times to obtain a complete set of homogenized properties.

- "**Finite deformation analysis and optimization of bio-inspired materials**"
- Developed an efficient homogenization-based Particle Swarm Optimization (PSO) method.
- Optimized unit cell architectures of heart-valve chordae tendineae using parallelized PSO algorithm via HPC clusters.
- Research results are published in a journal article and featured by the Global Medical Discovery website.

- **"Plastic strain localization in periodic materials with wavy brick-and-mortar architectures"**

- Directed the research work of 3 fourth year undergraduates and published one peer-reviewed article.
- Systematically examined the combined effects of waviness and platelet arrangement on the elastic-plastic response.

➢ **Solid mechanics, HUST** Wuhan, China

Graduate Research Assistant September 2008-November 2010

- **"Study of the delamination of fiber/Aluminum laminates under low-velocity impact"**

- Simulated delamination between single plies via Cohesive Zone Model (CZM) in LS-DYNA.
- Quantitated plastic effects of Al plies in absorbing impact energy and in reducing delamination between plies.
- Identified the preferred stacking sequence for laminates with strong delamination resistance.

- **"Strength analysis and optimization of Carbon Fiber Reinforced Plastic (CFRP) joints**"

- Designed CFRP joints with AutoCAD and created 3D finite element model in ANSYS.
- Predicted the delamination bearing strength of CFRP joints considering contact effects.
- Optimized the delamination bearing strength via PSO approach by varying ply angles.

Undergraduate Research Assistant May 2007-June 2008

- **"Stress and strength analysis of tube connections on air cooled heat exchanger"**

- Built 3D finite element model in ANSYS from technical drawing provided by collaborated company.
- Carried out stress analysis to check stress distribution at tube connections and verified the strength of steel.

Honors and Awards

- Travel Award for Graduate Students (2012) - University of Virginia
- Excellent Master Thesis in Hubei Province, China (2011)
- Excellent Graduate Student (2009) - Huazhong Univ. of Sci. & Tech
- Excellent undergraduate (2008) - Huazhong Univ. of Sci. & Tech
- Excellent Thesis of Undergraduate (2008) - Huazhong Univ. of Sci. & Tech
